

MAYER FABRICS EVOLUTION OF VINYL STATEMENT

Designers specifying for challenging environments have long favored vinyl for its durability, cleanability, and affordability. **Evolving vinyl** formulations in the Mayer Fabrics' product offering are a great next step in the material's eco journey. They retain performance qualities and pliability while addressing important concerns.

Evolving vinyl patterns are:

- **Free of PFAS** - long-lasting chemicals used across a wide range of products and may be linked to harmful health effects in humans and animals.
- **Free of phthalates** - softening agents for vinyl used as upholstery containing chemicals that can be endocrine disruptors with chronic exposure.
- **Prop 65 compliant** - a California measure intended to reduce toxic substances in drinking water.
- **Available HPD** - The Health Product Declaration provides for the disclosure of product contents and potential associated human environmental health hazards.
- **GREENGURAD Certified** - emission testing for volatile organic compounds (VOCs) in products contributing to indoor air quality.

Mayer Fabrics works proactively with its supply chain and industry leaders to understand the latest research and regulations surrounding substances. We are committed to doing our part in this journey to protect human health and the environment.
